Schulte, T., Oellers, N. and Adamczewski, M.
Putative alpha subunits of insect nicotinic acetylcholine receptors
more similar to vertebrate alpha 7 subunits and C. elegans Ce21
than to other insect nicotinic acetylcholine receptor alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1423

"Nicotinic acetylcholine receptors in the nematode Caenorhabditis
                                                                                                                                                                                                                                                                                                                                                                                                                                  STRAIN-Bristol N2;
Nelson J., Wohldmann P.;
Submitted (SEP-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: POSSIBLE ACETYLCHOLINE RECEPTOR.
-!- SUBCELLULAR LOCATYON: Integral membrane protein.
-!- SIMILARITY: BELONGS TO THE LIGAND-GATED IONIC CHANNEL FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ASSOCIATED WITH RECEPTOR ACTIVATION (BY SIMILARITY).
